

Grants Management 2.0

Software to simplify the intake, prioritization, and funding of grant requests.

A Modern Grantmaking Solution

Ensure grant funds are properly allocated by evaluating requests across criteria, such as impact, alignment, and sustainability. Effectively prioritize grant applications, compare costs and benefits, and make data-driven decisions that are most aligned to your organization's mission.

Prioritization Framework. A standardized way to evaluate grants across multiple criteria, such as risk and feasibility.

Real-Time Collaboration. Collect insights and feedback in real time to invest in projects most aligned to your organization's goals.

Ongoing Resource Optimization. Empower planners to maximize available resources throughout the year.

Scenario Planning. Leverage powerful algorithms and visualizations to provide a quick view into potential courses of action.

Purpose Built Analytics. Reduce the time required to reach data-informed funding decisions with easily digestible reports.

Transparent Reporting. Using a standard framework, in-app logging, and collaboration features to provide decision transparency.

Responsibly Fund The Future

Make Better, Faster Allocation Decisions

A prioritization framework to quickly quantify and organize facility investment decisions.

Optimize Your Portfolio

Create alignment between your requirements, desired outcomes, and funders expectations.

A Clear Portfolio Strategy

Develop robust decision justification with our prioritization framework and transparent reporting.

Maximize Investment Impact

Leverage scenario planning to ensure funded projects will have the greatest impact.

“ Successful grant funding requires thoughtful and well-informed decisions.

- Jeff Bezos, Philanthropist and Founder of Amazon

Success Stories

Public Health Institute Grants Management. Prioritizing agency-initiated targeted programs including research training grants and cooperative agreements. Since implementing Decision Lens, the agency has increased objectivity and transparency across the organization, resulting in a repeatable, defensible decision-making process for grant selection.

Transportation Grants Management. R&D grant prioritization has been modernized with Decision Lens. By revamping the decision-making process for allocating resources, the agency has improved collaboration, created an audit trail, and can use data to justify decisions.

Plant Protection Proposal Management. Seven discrete goal teams use pre-established criteria to screen and score project proposals submitted from research institutions across the country. With Decision Lens, they have reduced reliance on spreadsheets and other manual processes for more agile, defensible data-driven decisions.

Built for the Public Sector

Security

FedRAMP, IL-2 Compliant
AWS Hosting, IL-4/5 (Via
Second Front)

Hosting Options

AWS GovCloud SaaS, Agen-
cy-Networks (NIPR, SIPR,
JWICS), Advana, Self-Hosted
